1. GENERAL DESCRIPTION

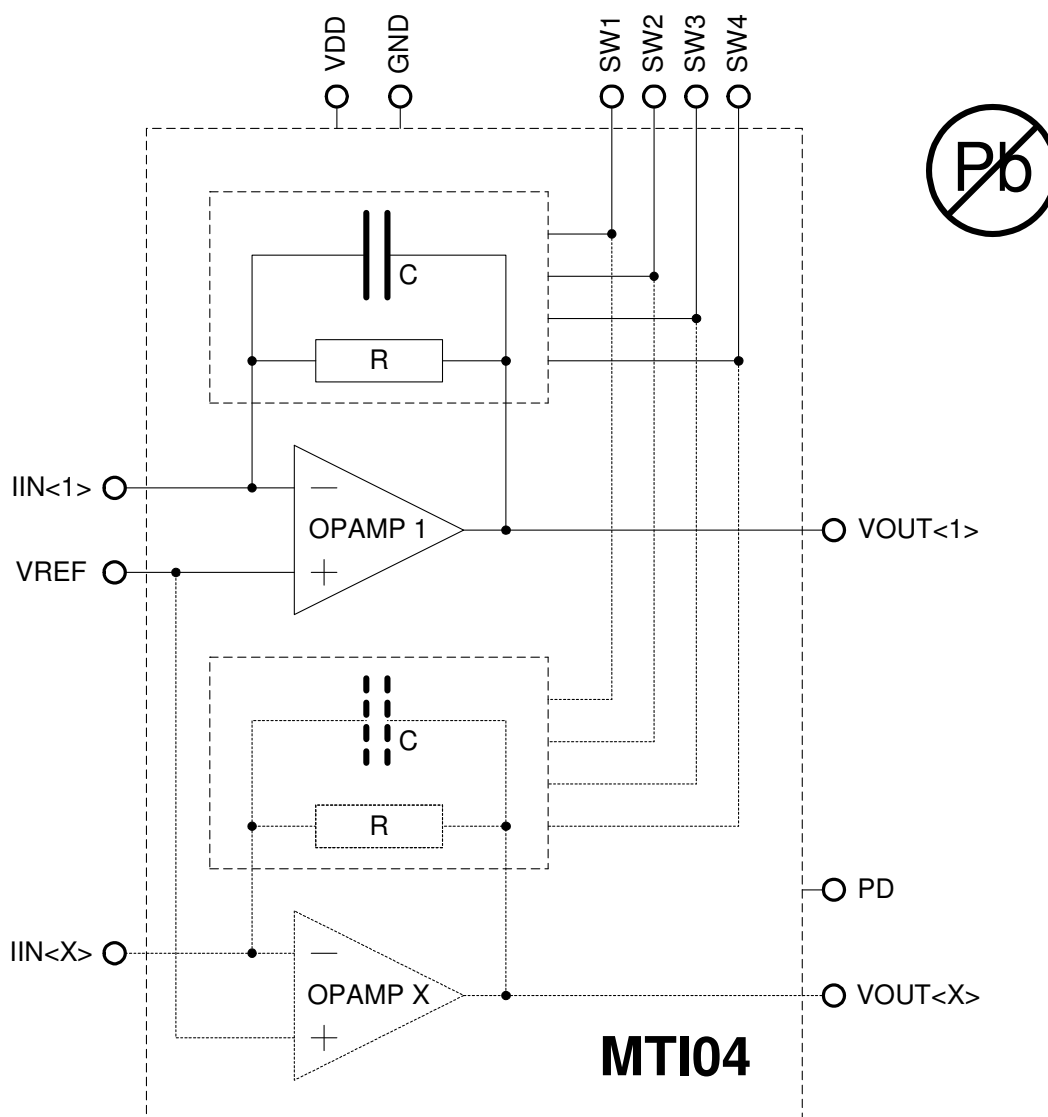

The MTI-devices are a family of integrated circuits of **programmable gain transimpedance amplifiers** with **4 channels** per IC (more custom specific, on request).

The MTI-devices are mainly used for **signal conditioning of sensors with current outputs**. They are especially suitable for connection of photodiodes of **array and row sensors**.

The possibility to **adjust the transimpedance in 8 stages** is a special feature. The adjustment is made by programming three pins and is valid for all channels together.

The device packages (naked chip on request) are ROHS conform and optimized for **COB-mounting and SMD**.

3. DESCRIPTION OF INTERFACE

3.1 Pinning

signal name	typ.	a/d ^a	function
VDD	input	a/d	power supply
GND	input	a/d	power supply
VREF	input	a	reference voltage
SW1	input	d	input 1 for adjustment of transimpedance of MTI-amplifier (pull down)
SW2	input	d	input 2 for adjustment of transimpedance of MTI-amplifier (pull down)
SW3	input	d	input 3 for adjustment of transimpedance of MTI-amplifier (pull down)
SW4	input	d	switchable frequency range dependend on input capacitance of the photo-sensor (pull down)
PD	input	d	power down modus (pull down)
IIN<X>	input	a	analog current input of amplifier X
VOOUT<X>	output	a	analog voltage output of amplifier X

a.) analog or digital

3.2 Adjustment of Transimpedance

settings of digital inputs			transimpedance R
SW1	SW2	SW3	
VDD	VDD	VDD	20M Ω – stage 1
GND	VDD	VDD	10M Ω – stage 2
GND	VDD	GND	5M Ω – stage 3
VDD	GND	VDD	2M Ω – stage 4
GND	GND	VDD	1M Ω – stage 5
VDD	GND	GND	500k Ω – stage 6
VDD	VDD	GND	100k Ω – stage 7
GND	GND	GND	25k Ω^b – stage 8

b.) default by pull down

3.3 Switchable Frequency Range

settings of digital input	allowed capacitance of photo-sensor
SW4	
VDD	
GND	
	< 5pF
	< 80pF ^c

c.) default by pull down

3.4 Power Down Modus

settings of digital input	bias current of the IC
PD

4. DESCRIPTION OF FUNCTION

The MTI-devices are programmable gain transimpedance amplifiers with different numbers of channels (MTI04 – 4 channels). There is one transimpedance amplifier per channel between a current input IIN<X> and a voltage output VOUT<X>. Its transimpedance is selectable in 8 stages. This adjustment can be effected by setting of digital inputs SW1, SW3 and SW4 and is valid for all channels simultaneously (headline 3.2).

Also simultaneously valid for all channels is a compensation of the input capacitance of photo-sensors for two possible frequency ranges (switchable by SW4, headline 3.3). The pins SW1, SW2, SW3 and SW4 are pull down inputs.

The second input of all transimpedance amplifiers is used for a *common* supply by a reference voltage necessarily fed in through the pin VREF.

All channels are compensated for an external input capacitance of the photo-sensor of smaller than 80pF (SW4 = GND).

The power supply for the MTI-devices is typical 3V to 5V between VDD and GND.

The power down modus is adjusted by PD = VDD and switches off the functionality.

5. ELECTRICAL CHARACTERISTICS

5.1 Maximum Conditions

Violations of absolute maximum conditions are not allowed under any circumstances, otherwise the IC can be destroyed.

All voltages are referenced to GND = 0V.

parameter	name	min.	max.	unit
power supply	VDD	0.3	7.0	V
input and output voltages	⇒ IC-pinning	0.3	VDD+0.3	V
power dissipation	P _{OP}		0.025	W
operating temperature	T _{OP}	−40	125	°C
storage temperature	T _{STG}	55	155	°C

5.2 Operating Conditions

All voltages are referenced to GND = 0V.

parameter	name	min.	typ.	max.	unit	condition
supply voltage	VDD	2.7	3 to 5	5.5	V	
bias current MTI04	I(VDD)		2.5	4.0	mA	27°C, VDD=5.5V
bias current MTI04	I(VDD)			8	μA	PD=VDD
operating temperature	T _{OP}	−40	27	125	°C	
input high level	V _{IH}	0.7*VDD		VDD+0.3	V	
input low level	V _{IL}	−0.3		0.8	V	
reference voltage	VREF	0.4		VDD−0.4	V
